Telephone: SHEFFIELD 20202. Telegrams: "SPEAR SHEFFIELD"

To our Ironmonger friends

This coming year will bring to fruition our plans for increased production to meet the ever increasing demand for Spear & Jackson products. The fire last April in our saw handle shop seemed at the time disastrous but it has given us a chance to replan completely this department. I would also point to the rationalisation of production of spades and forks which must eventually benefit all concerned, and about this there is an announcement on **pages 38 and 39**.

In many ways 1960 has been for us a memorable year. We began our bicentenary year with the offer of a notable spade, listed on **page 41**; we rounded off the occasion by the introduction of a new and we dare to claim an equally notable saw, about which we have something to say on **pages 3 and 10**. We start the third century with the publication of an illustrated book, "Story of the Saw", a new and full documented history which appropriately is referenced on the last page of this catalogue.

This latest catalogue, incidentally, is the largest in format and in number of pages that we have ever issued. We have laboured to make it also the clearest, so that even the busiest ironmonger and the youngest recruit to the Trade can find his way. Write and tell us how far we have succeeded and in what way we failed in these aims—for our future guidance.

To the many I know personally and to those of you I have

not yet met, may I end with the assurance that we shall make every effort to give you much prompter service in 1961 than circumstances allowed in 1960. As you know, we have always depended on you to distribute our tools and we are prepared to go on spending large sums to ensure the continued success of this policy.

Yours sincerely,

SALES DIRECTOR.

Another **DOUBLE CENTURY** Product !

A SAW FOR THE HANDS OF CRAFTSMEN

Two centuries of saw-making experience have gone into the creation of a superb new panel saw, the second of two products introduced to mark the occasion of a bicentenary in 1960. This latest example of the saw-maker's art is the product of many traditional skills allied with machine operation and metallurgical control.

The steel is melted in the Spear & Jackson steelworks, being more highly alloyed than steels normally selected for standard quality craftsman saws, and each blade is hardened and tempered so that its teeth shall be as hard and as tough as the practical limitations of setting and sharpening permit.

The glazed and polished blade is skew back and narrower at the toe. The blade etching brings back a 100-year old quality mark which forms the central motif of an elegant etching commissioned for this saw.

Fitted to the blade is an attractive weatherproofed rosewood handle, the design of which has been based on an opinion poll among experienced joiners. New disc and medallion embellish what is in every detail a pedigree saw.

Matching the beauty of the saw is a striking and original display pack: each saw is recessed in a plastic tray, flock-sprayed to simulate *purple velvet, contained within a rigid cardboard box printed in purple, yellow, black and white—a flash of colour for your window!

* The choice of purple to identify and distinguish this top quality panel saw is also the colour selected for labelling garden tools in stainless steel, which development continues a policy of price and colour grading of saws and garden tools.

CONTENTS

The alphabetical listing below is supplemented by a pattern numbers index on pages 102 and 103. *Particular attention is drawn to the sectional headings 1 to 8 (opposite).* Guided by these you should have no difficulty in locating the tool details sought despite the rearrangement of certain pages of previous catalogues carried through in the interests of a more logical grouping of tools.

Spear & Jackson Tools have been chosen by the Council of Industrial Design for their permanent exhibitions in London and Glasgow, and for overseas exhibitions including New York and Brussels. The Co.I.D. seal is applied to these tools: DOUBLE CENTURY and SPEARIOR Saws (E200, 88, 46); NEVERBEND Spades (S218, C163); NEVERBEND Fork (C375); Chrome-armoured Lightweight Garden Shears (DC408); Chrome-armoured Trowels and Weed Forks (DC690); Stainless Steel Trowels and Weed Forks (DC700); Hayforks (C478); FLEKO Lawn Rakes (DC669); Spear & Jackson Log Saw (E38). All these tools have been selected for "Design Index", the illustrated record of well-designed British goods from which exhibits to be displayed are chosen.

SPEAR & JACKSON LTD.

A Note on this Section

EVERY BLADE IS PROTECTED BY A TRANSPARENT, HARD, DRY LACQUER WHICH SEALS OUT RUST.

This listing of standard sizes and point sizes of Spear & Jackson hand and tenon saws is based on a range simplification programme initiated two years ago. As with garden tools — see announcement on pages 38 and 39 — saws are listed in four qualities but in a narrower range of sizes. Distinctively presented, all these saws are colour graded for customer selection.

Handsaw teeth are usually measured in "points per inch." When ordering note that there is always one more point per inch than there are teeth per inch. e.g., 8 points = 7 teeth.

CHROME—VANADIUM HANDSAWS

200 DOUBLE CENTURY

FOR THE CRAFTSMAN AND FOR PRESENTATIONS

This handsome saw is the second of two products announced in the Company's bicentenary year and is catalogued here for the first time. Of chrome-vanadium steel, hardened and tempered to practical limits, the blade of this new panel saw has teeth as hard and as tough as any ever manufactured by the Company. Its skew back blade is highly glazed and attractively etched with a traditional design. The Rosewood handle is weatherproofed and carries a purple disc to denote top quality. Each saw is numbered and guaranteed and is supplied with a plastic teeth-guard.

See page 3 for presentation packing.

88 SPEARIOR

FOR THE SKILLED TRADESMAN

A hardened, toughened chrome-vanadium steel made in our own steelworks is the starting point of a manufacturing journey twenty-seven processes long. The flexible, tensioned, skew back blade — precision taper ground and polished and deep acid etched — has perfect balance, its cellulosed handle of kiln dried Beech is correctly located and united with the blade by means of four brass screws and one brass medallion, colour-graded red.

See page 94 for sheath-packing.

TUBULAR FRAME SAWS

E38

Spearfast

Fitted with the new chrome-armoured web, the ever popular Spear & Jackson frame or log saw is on hand to take the toil out of all rough sawing jobs — whether it's logging and firewood cutting, lopping and pruning, hedging or fencing.

Here are some sales arguments worth making to **your** customers.

Oval Section Frame for greater rigidity.

Finish: a brighter red, durably enamelled, improves appearance.

Exclusive Patented Guard protects knuckles.

Patented Inset Sleeve permits increased tensioning by direct pull on blade and makes for easy replacement of blades.

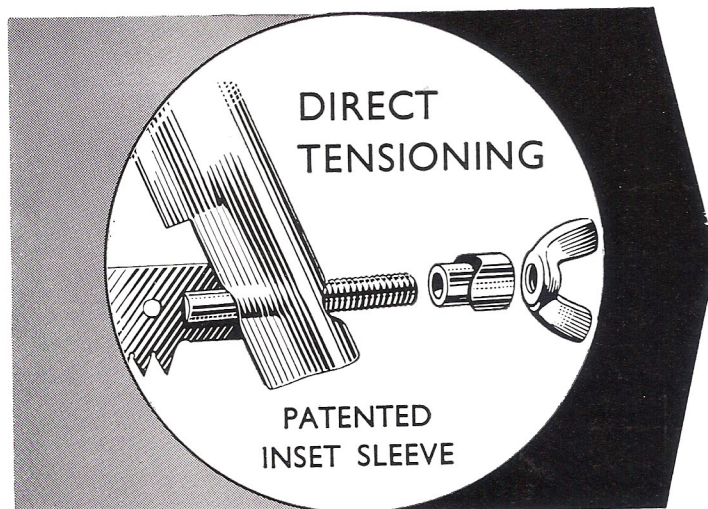

Note that tension is infinitely adjustable: more tension can now be applied safely and more easily and tension can be reduced when the saw is not in use.

Handgrip in grey, soft rubber uniquely styled for extra comfort, contrasts effectively with the red of the frame.

These and other points of styling and function are kept under continuous review and improvements incorporated from time to time.

IN THREE SIZES

	24"	30"	36"

Included in a selective display of tools. Awarded a Gold Medal, Brussels International Exhibition, 1958.

SPEAR & JACKSON GUARANTEED TOOLS

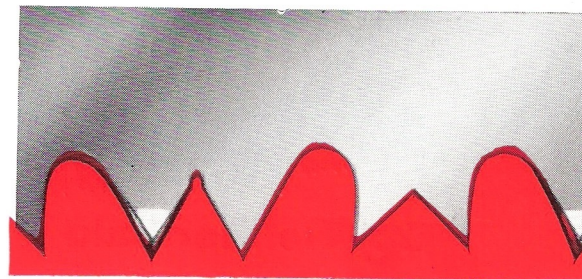

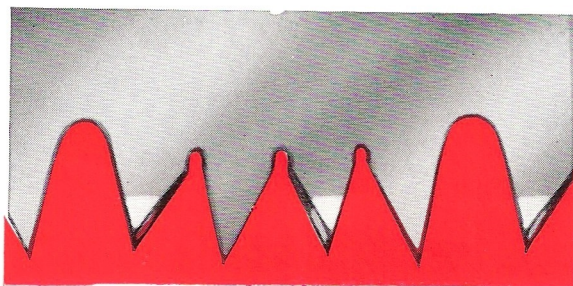

TUBULAR FRAME SAW BLADES

Now with **Chrome-Armoured** teeth for longer life, easier cutting

All Spearfast and Forester blades are put through a new process at Aetna Works to protect the teeth with a layer of dense, hard chrome. Teeth are tip-hardened *at the surface only* and so are resilient and tough enough to withstand rough use. Working and wearing characteristics are greatly improved. Chrome-armoured teeth stay sharp at least three times longer—that is the claim we make.

Each blade will therefore do three times the work before blunting signals the need for replacement. Your customers will enjoy easier cutting with these new Spearfast and Forester blades. The process also protects the tips of teeth from rust, gives protection in fact just where needed to prevent those sharp cutting edges from crumbling into rust when the log saw is laid away in woodshed or garage.

E38 "Spearfast" Tooth

FOR THE PRIVATE USER

These longer-life blades are also fast-cutting by virtue of their tooth formation. "Two strokes do the work of three!" Newly installed machinery ensures that each blade is accurately set and precision sharpened. And the fitting of new blades has been made easier. You can now sell with confidence a *packaged* replacement "Spearfast" blade to owners of Spear & Jackson log saws—blades, incidentally, that fit all standard frames.

"SPEARFAST" OR "FORESTER" TOOTH

Woods only	...	24"	30"	36"
Price each	...	4/3	5/-	6/-

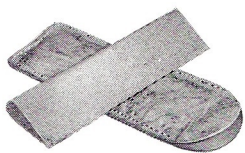

E383 "Forester" Tooth

FOR THE PROFESSIONAL USER

A fast-cutting blade for felling and re-sawing green, unseasoned timber. Two peg and raker teeth are preferred by many professional users, farmers and foresters in particular. This formation with its shaping and spacing of cutting and clearance teeth is made to F.P.R.L.* specifications. The tough chrome-armoured teeth and rakers can be maintained correctly by means of a steel file in the hands of an expert filer, but recommended is a silicon carbide stone of suitable shape and grading.

*Forestry Products Research Laboratory, Princes Risborough.

Sharpening Instructions

F46 Use a wedge-shaped silicon carbide slipstone for touching up the chrome-armoured teeth.
4/6 each

F47 A steel file, provided it is new, can also be employed. Preferably choose one with rounded edge — such as the Spearfast file illustrated.
4/9 each

COLD CHISELS

D852 A. H. C. Steel Cold Chisels

Octagon Section.
Ground and Glazed.

Made from a Tungsten Alloy tool steel that hardens in air from forging heat, thereby dispensing with hardening and tempering treatments. Air Hardening Chisel steel is particularly tough, keeps a perfect cutting edge under all conditions without fear of snapping or breaking and greatly reduces repair bills.

A.H.C. tool steel is also supplied in bar form. Prices on application.

Heat Treatment

TREATMENT INSTRUCTIONS FOR A.H.C.

TO FORGE: Heat carefully to a good yellow, 950°C. Do not continue forging below dull red.

HARDENING: A.H.C. is air hardening and hardens from the forging temperature, 950°C., either in natural air or air blast.

CHISEL HEADS: After forging should be reheated to Dull Red Heat (700°C) and allowed to cool off in natural air. This prevents splintering and undue mushrooming.

Heat Treatment

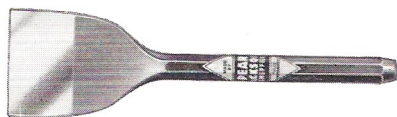

TREATMENT INSTRUCTIONS FOR CAST STEEL CHISELS

Harden the blades from 800°—810°C. (Bright Red) in oil. Temper 280°C. (Purplish Brown). This treatment applies generally to flat chisels.

Variations of hardness may be obtained by reducing or increasing the tempering temperature only.

ANNOUNCEMENT

Reduction in the number of patterns and alterations in spade sizes

The issue of this revised section covering spades, forks and shovels completes an important stage in the plan to simplify and standardise our tool ranges. Initiated three years ago in our mutual interests, this policy of variety reduction has already led to reduced listings of hand and tenon saws.

With 23 fewer spade patterns and sizes, and fewer fork and shovel listings, there should be immediate advantages for you and for us—and eventually for your customers.

We have reduced the patterns of spades in particular that need be stocked for wide and full customer choice. At the same time we offer greater freedom of choice between *qualities* and a more logical range of sizes.

Four Qualities

We make room by deletions for an expanded range of qualities in spades—and other basic garden tools—to suit all your customers, whether the call is for stainless steel, the new chrome-armoured range, standard NEVERBEND tools or the “Green Label” economy range. Here are the essential tools, the most-often-bought tools, graded by quality and price—*colour differentiated*.

Purple Label	Red Label		Green Label
STAINLESS STEEL	CHROME-ARMOURED	ALLOY STEEL	CARBON STEEL
Spades	Spades	Spades	Spades
Forks	Rakes	Draw Hoes	Draw Hoes
Trowels	Dutch Hoes	Forks	Hedging Shears
Weedforks	Hedging Shears	Rakes	Trowels
	Trowels	Dutch Hoes	Weedforks
	Weedforks	Weedforks	

Regional Patterns

Variation in patterns of spades across the country has long been the particular burden of the manufacturer and no *significant* reduction in the number of these patterns can be achieved at this stage without sacrificing legitimate customer choice. However, for some years stainless steel spades have sold nationally; these solid socket spades are of course based on the Lancashire and Cheshire pattern. It has therefore been decided to delete the square mouth Yorkshire solid socket spade from the 1961 list and to merge this with the round mouth. The new national pattern NEVERBEND alloy steel spades will of course also be available with treads for London and Scotland. Other regional patterns in spades are retained.

Size Range

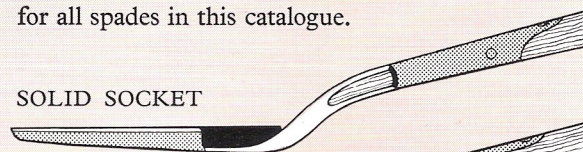

The pages immediately following show how well the new sizes of spades are graded for customer selection. Here illustrated are the particulars you need to know—the new yet simple nomenclature with a side by side comparison of sizes.

	Amateur			Professional
	BORDER	SMALL DIGGING	STANDARD DIGGING	LARGE DIGGING
SPADES	5½" × 9"	6½" × 10½"	7½" × 11½"	8" × 12"
FORKS	5½" × 9"	7" × 11"	7½" × 12½"	9" × 13"

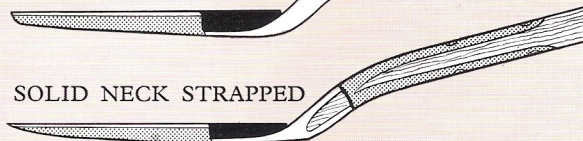

Handle Fitting

The diagrams show, in section, the three types of handle fitting used for all spades in this catalogue.

RED LABEL

Gardeners everywhere are saying

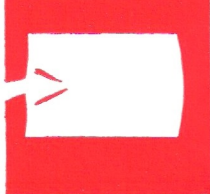

**“The next spade I buy will be a
Neverbend ‘Double Century’!”**

C200 Standard Digging—11" Solid Socket

Introduced last year, the Neverbend ‘Double Century’ spade has been acclaimed by keen gardeners everywhere. No wonder! It has many of the advantages of a stainless steel spade but is only half the price. The blade is glazed to a smooth surface which is subsequently deep-chromed to a diamond-like hardness and then highly polished—processes that impart quite exceptional characteristics, not only in the degree of rust-resistance but in the ease with which the spade slices through the soil. *As with stainless steel the effort of digging is greatly reduced.* Sheath-packed blade in two-colour p.v.c. envelope fitted with press studs. One size only: $7\frac{1}{2}" \times 11\frac{1}{2}"$, 11" solid socket. Round top. T or wood-dowelled D handle.

New additions to the Spear & Jackson range of Neverbend **Chrome Armoured** Garden Tools

These two unique tools, along with the Neverbend Chrome-armoured spade illustrated on page 41, complete a short basic set of long-handled garden tools for the most discerning of gardeners. Glazed and polished and processed for wear and rust resistance, these are *good looking*, traditional tools with all the rugged strength associated with forged tools previously only available in standard Neverbend quality.

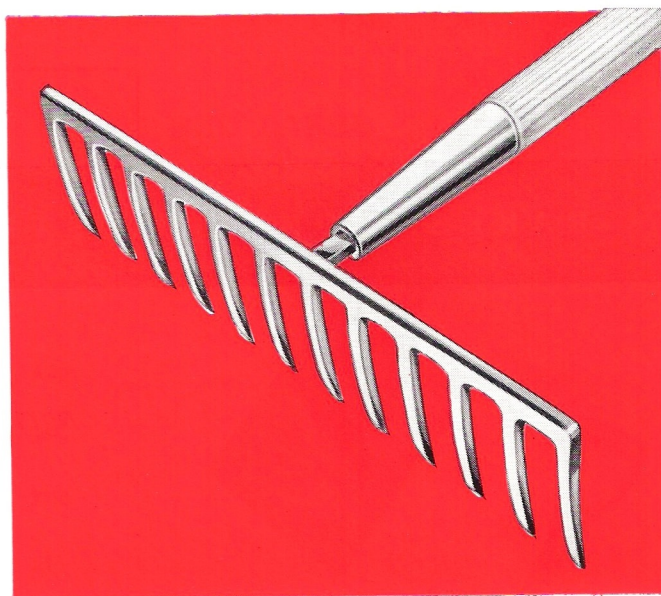

NEVERBEND

DC921

Dutch Hoes

Offered in one size only: 5-inch forged head, chrome-armoured and rust-resisting, with 5-ft. weatherproofed Ash handle.

RAKES

FLEXO

DC669 Lawn Rake

Self-Cleaning in use by means of the unique straight line front. Simply turn the rake over and draw the backs of the prongs along the ground and the Flexo will shed any entangled leaves or moss in an instant.

Demonstrated on TV, this adjustable lawn rake plays a dual role. Its 16 prongs can be made stiff for scarifying lawns or flexible for gathering leaves.

The "Flexo" is first rate value.

Variable flexibility. A single, easy movement of the Spacing Bar will give close-spaced, stiff prongs for eradicating moss on lawns or wide-spaced, flexible prongs for gathering leaves and cut grass or raking over paths.

Weatherproofed handle. Green cellulosed, its cool-looking surface is smooth for comfortable handling and protected against dampness.

Replaceable prongs. Quickly, and without tools, a damaged prong can be removed and replaced.

Prongs of rust-proofed Spring Steel.

GARDEN SHEARS

NEVERBEND

DC408

Chrome-Armoured Lightweight

These hedging shears are being manufactured to closer tolerances and are fitted with a fully functional nut and bolt, adequately locked but capable of adjustment through 10° of arc*. The nut and bolt assembly—to scale drawings of consultant industrial designers—includes a light spring to absorb any slackness when the shears are fully open. The 8" blades with patented notch are hollow ground. They are chrome-armoured and rust-resisting. Shaped natural beech handles are double cellulosed and fitted with sherardised, stove-enamelled red ferrules. Distinctively styled, these "Neverbend" super shears are exceptionally light and well-balanced.

8" Notched. Display-boxed (see page 95) ... 37/6 per pair

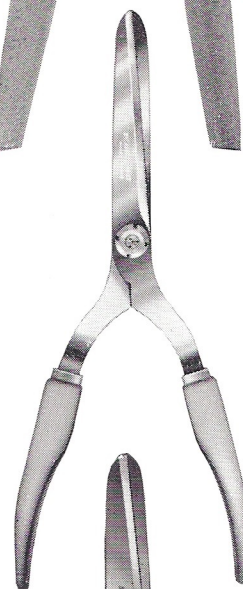

NEVERBEND

DC409

Lightweight

New to the Neverbend range are these garden shears with uniquely shaped handles of flock-filled rubber. The bright polished blades are hollow ground and assembled with new type* spring-loaded nut and bolt. This new pattern shear is as delightful to look at as to handle and unsurpassed in value.

7" Plain. (Lady's) Sheathed ... 28/3 per pair
8" Plain 29/3 per pair

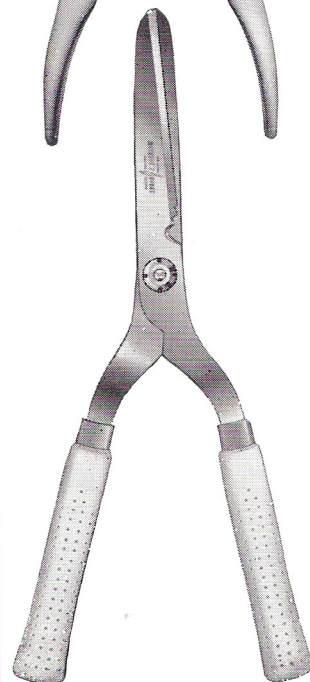

NEVERBEND

DC410

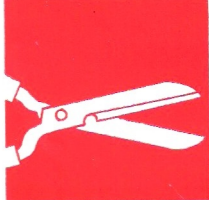

Lightweight

Introduced in 1959, this notched pattern hedging shear with 8" hollow ground blades is lighter in weight than the traditional patterns. It is fitted with new type* spring-loaded nut and bolt and has flock-filled rubber handles.

8" Notched. Sheathed ... 30/- per pair

* New design incorporates a slotted nut and spring washer, and a multi-tab turret washer to provide a final adjustment. The 4 slots and 9 tabs allow a 10° adjustment, i.e. approximately one thousandth of an inch advancement of the nut per increment of adjustment.

GARDEN SHEARS

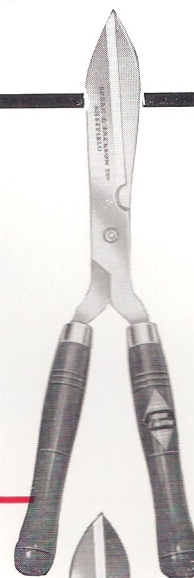

NEVERBEND

DC407

Forged Full Weight

A heavy duty hedging shear with forged 9" blade for the professional gardener. This traditional pattern with 10½" turned and polished handles is also the choice of gardeners demanding something extra in the way of strength, both of blade and shank.

9" Notched. 10½" polished handles 27/- per pair

CIRCULAR SAWS

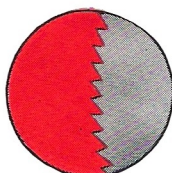

Small Circular Woodsaws (4" - 12" dia.)

Suitable for bench machines and portable electric tools. Set and sharpened ready for use. Dry-lacquered and individually carton-packed. See page 95.

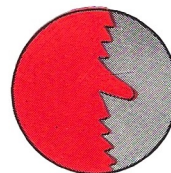

A special Sheffield saw steel, and rolled plate of heavier gauge than is normal, ensure longer life between sharpenings and "flutter-free" running.

No. 13 Gullet or Combination Tooth.

1A Handsaw Tooth.

B2 Planer Tooth.

A small bush is enclosed with saws indicated by asterisk, so converting to smaller spindle diameter.

No. 13 Gullet or Combination Tooth is recommended for general purpose sawing and cutting with the grain. It can be used for crosscutting.

1A Handsaw tooth is for cutting across the grain.

B2 Planer tooth is excellent for working plywood and hard-board giving a good finish, whether ripping or crosscutting.

Size	Alternative Centre Hole	Gullet or Handsaw Tooth	Planer Tooth
4"		Price each 8/6	Price each —
4"	$\frac{3}{8}$ " or $\frac{1}{2}$ "*	8/6	—

12"	$\frac{1}{2}$ " or $\frac{5}{8}$ "*	31/9	38/6

Solid Tooth Circular Saws (14" - 40" dia.)

Set and sharpened ready for use.

When ordering state:

- Diameter.
- Details of centre hole and pin hole. (Send rubbing if available).
- Distance from tooth to tooth or number of teeth.
- State purpose for which saw is required. (Crosscutting, ripping, etc.)

One gauge thicker than standard may be specified without extra charge.

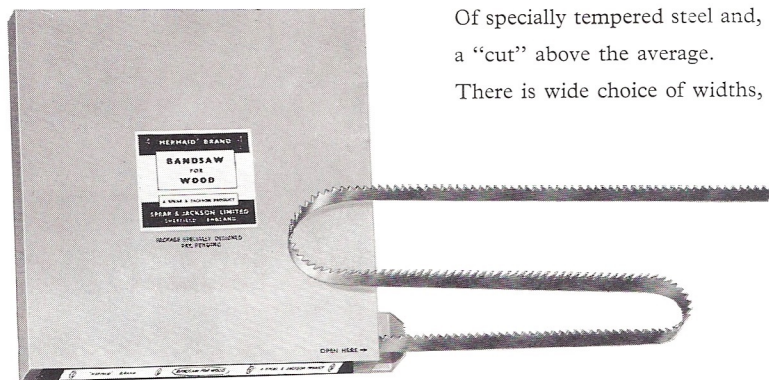

Sizes up to 84" supplied. Prices on application.

From stock. Saws in diameters from 14" to 36" in standard gauges with tooth shape suitable for ripping medium hard-woods. (No. 13 Tooth).

NARROW BANDSAWS FOR WOOD

Of specially tempered steel and, like all other products in the "Mermaid" sawmill range, a "cut" above the average.

There is wide choice of widths, points and gauges to suit all requirements.

This handy pack facilitates trouble-free stocking. With the provision of two windows the user can keep a check on his coil supply.

Boxed in Coils

Measured lengths are readily extracted and cut as required.

Coils are normally 200 ft. long.

Non-standard sizes can be supplied.

Prices on application.

All saws less than 12 ft. are charged at toothed, set and sharpened price plus 12½%, plus 2/- extra per saw for brazing.

Extra Special Nickel Chrome Quality at 5% extra.

Bandsaws are exposed to severe strains. The method of working, conditions of load and fatigue stresses make such heavy demands on the saw that only the very best saw steels give satisfactory service. Spear and Jackson narrow bandsaws are made from a special grade saw steel, which will give unequalled service provided the saw is properly used. The breaking of a bandsaw is more often due to lack of care and attention than to faulty material.

Special tempers and teeth can be supplied for high speed fusion cutting of steels and also for sawing bone or rubber.

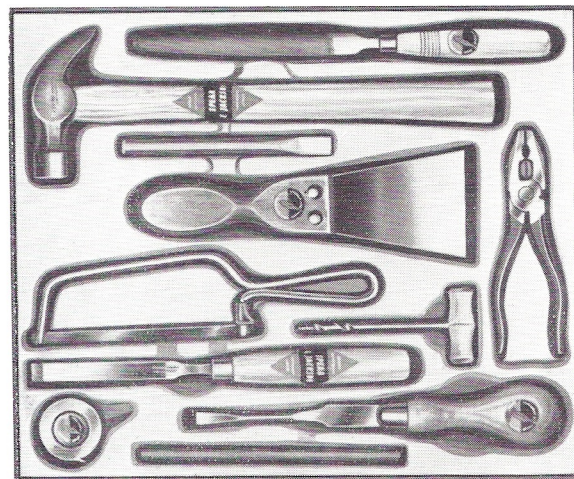

TOOL KITS

An ideal gift at any time of the year

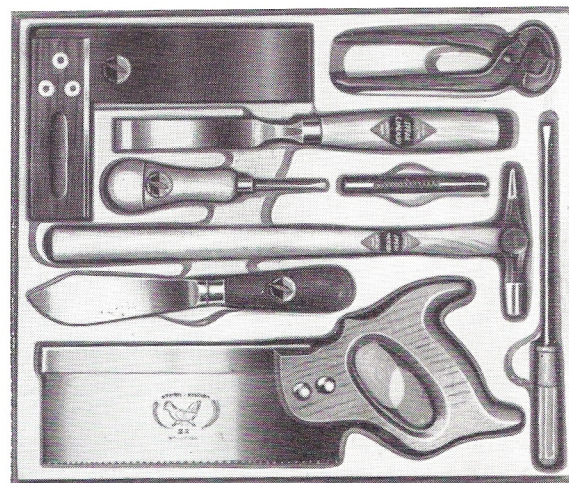

These repair kits group the tools essential to the man (or woman) doing odd jobs about the house. Each tool is recessed in a red plastic tray. Each tray fits snugly into an attractive display box, the lid of which indicates the position of each tool. The No. 2 pack has won a silver trophy for the best rigid box on display submitted in the British Paper Box Packaging Contest. Winner also in international competition of the coveted "Eurostar", acknowledged "Oscar" of the packaging world, this pack has been awarded highest marks for sales appeal and convenience.

New Packaging Means Bigger Sales for You

Saws

Stimulating, cheerful and distinctive, these sheath packs for Spear & Jackson hand and tenon saws establish family identity while differentiating between qualities. A thick and thin yellow line symbolises contents.

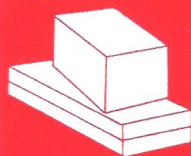

Spades

Another example of the Spear & Jackson house style is this spade blade envelope-sheath. Featured on the reverse are other basic long handled tools in the "Neverbend" range.

SPEAR & JACKSON GUARANTEED TOOLS

PACKAGING

Circular Saws

Re-designed cartons for small circular saws have setting and sharpening instructions on the reverse.

Chrome-armoured Garden Shears

A rigid box with red insert effectively displays the "Neverbend" Chrome-armoured Lightweight Garden Shears.

Handyman's Kits Nos. 1 and 2

Selected tools are here grouped in red plastic trays packed in colourful display boxes. This pack has won national and international awards.

Stainless Steel Trowel and Weed Fork

A newly designed twin pack for stainless steel Trowels and Weed Forks. Also single packs.

Chrome-armoured Trowel and Weed Fork

An original (registered design) display pack combining "carry-home" convenience has been developed for these "Neverbend" Trowels and Weed Forks. The tools are packed separately.

" Garden Tools "

Describing manufacture of spades and forks, pattern variety, how the spade, fork, rake and hoe are used, with diagrams and sketches.

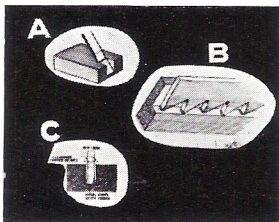

Publication No. 117

" The Saw Family "

Manufacturing sequences on handsaws and circular saws, how saws cut wood and how they should be used, with diagrams and sketches.

Publication No. 118

WALLCHARTS

Publication No. 119

"Basic Garden Tools" and how to use and care for them.

Publication No. 120

"The use and maintenance of Hand and Back Saws."

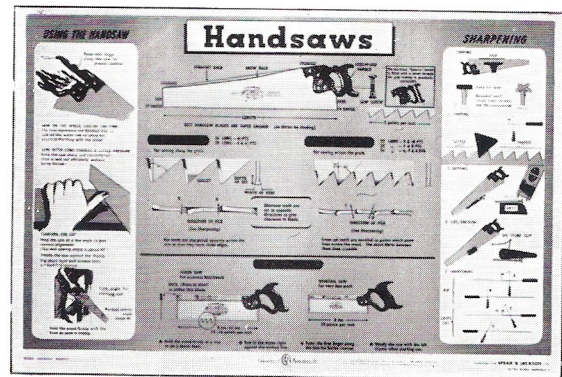

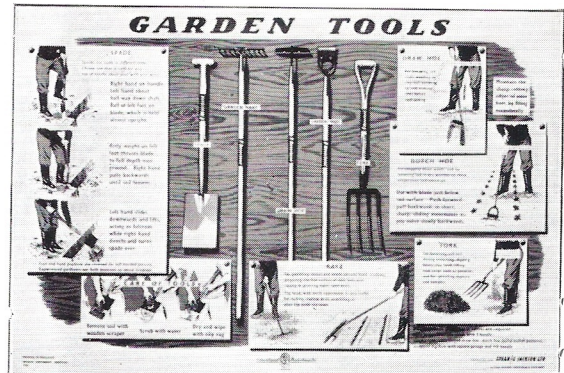

Other Wallcharts include:

Publication No. 133

The 10" Tilting Arbor Saw Bench

Publication No. 134

The 16" Canting Table Bandsaw.

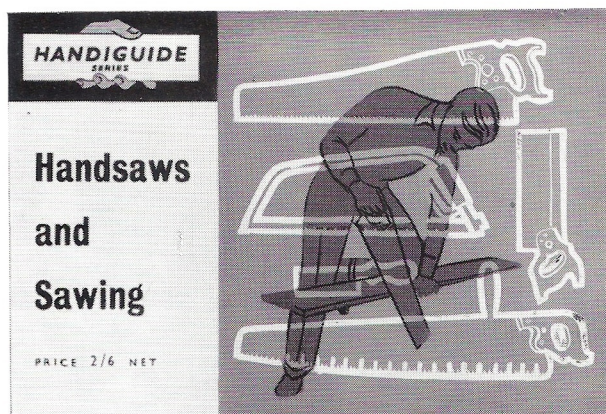

HANDIGUIDES

Produced as textbooks for schools, these "handguides" are of distinct interest to the home handyman and gardener. See below for details of free display stand.

Publication 110

HANDSAWS & SAWING

By a leading teacher of handicraft students. Rip, crosscut, tenon and dovetail saws—and the more unusual types of saw—are illustrated and their salient points described. Explanations follow on how a saw cuts and how to cut with a saw.

Publication 112

GARDENING & GARDEN TOOLS

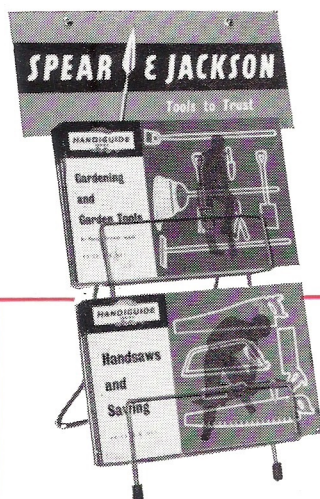

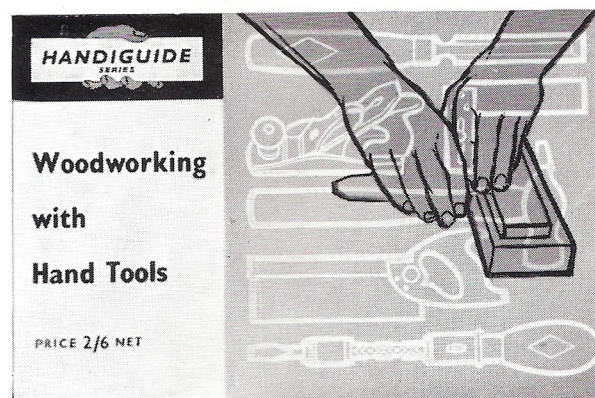

By Britain's most famous gardening expert and television personality, Mr. Percy Thrower. An elementary textbook on the fundamentals of gardening, this guide contains clearly written chapters outlining essential jobs to be done throughout the year. Notes on choosing and looking after tools are included.

Publication 113

WOODWORKING WITH HAND TOOLS

The latest title in the 'handiguide' series. Presentation follows the style of previous books with illustrations in line and tone of tools and their correct method of use. The book includes descriptions and illustrations also of nails and wood screws and their application, dowels, hinges and joints as well as outlines of simple projects.

E62 Two-Tier Display Stand

For handguides to your selection, free with 12 books invoiced at 2/6 each less usual discount.

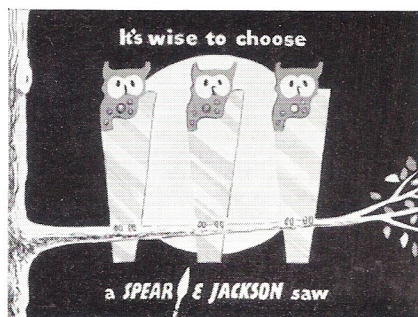

OTHER LITERATURE

Publication 102

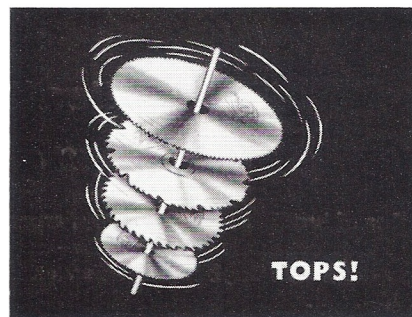

A manual for skilled tradesman and keen amateur wishing to learn the finer points of hand and tenon saw maintenance. Handicraft teachers at schools in your area will like to know of booklet.

Publication 131

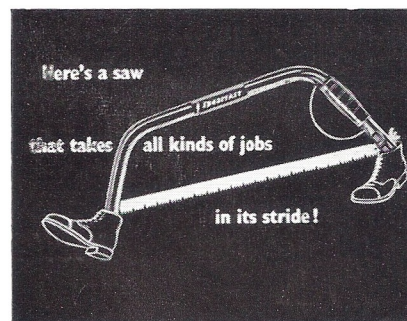

Each of three qualities of Spear & Jackson hand and tenon saws is identified with the user, be he skilled tradesman, keen amateur or the man who uses a saw for odd jobs. This identification is emphasised by colour-grading.

3 Counter Leaflets for your Customers

Publication 125

Written for the portable power tool enthusiast, this leaflet includes notes on how a circular saw cuts wood and instructions on setting and sharpening.

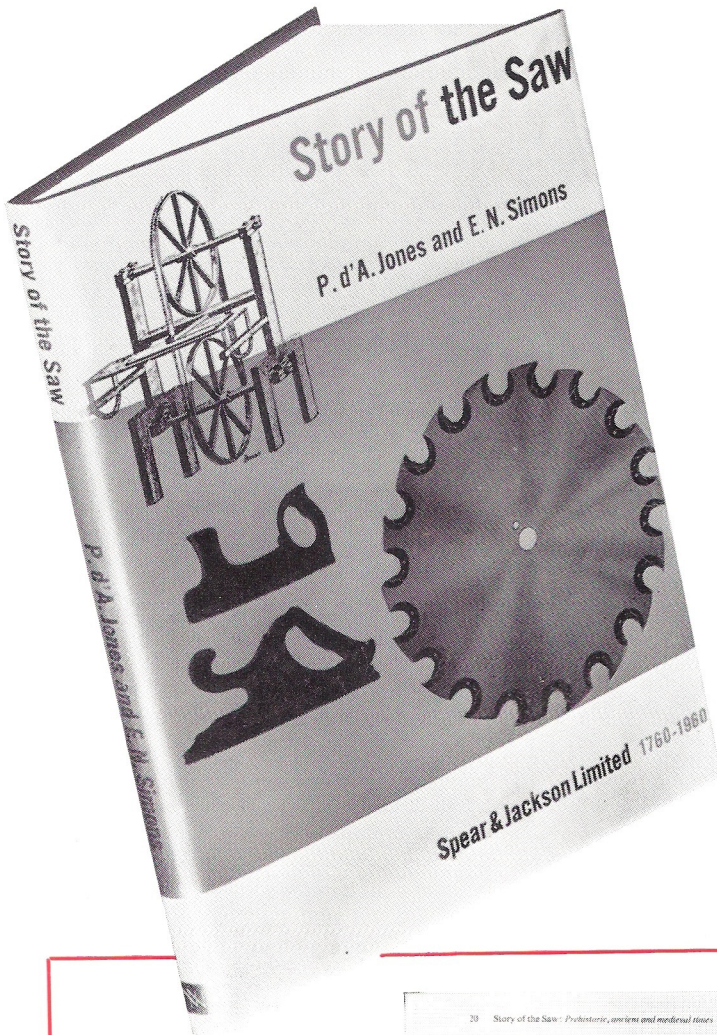

Publication 104

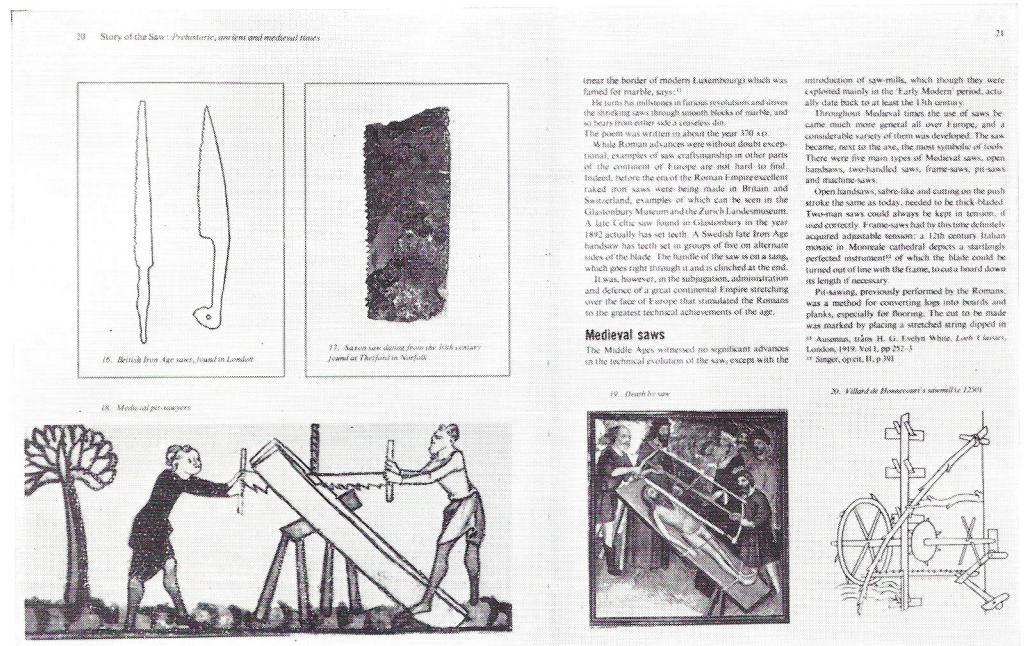

A leaflet describing the many uses for the Spear & Jackson tubular frame saw and the easy-cutting advantage of the special "Spearfast" tooth, now available with chrome-armoured tips.

"Story of the Saw"

Publication 200 To mark our 200th anniversary as makers of special steels, saws and other edge tools, we have just published a new and entertaining study of the saw in history. This is no dull history book. Nor is it a book about Spear and Jackson. The authors have drawn material from many parts of the world and their story covers the evolution of the saw from its beginnings as a primitive flint implement in prehistoric times to the highly specialised components of the machine tools serving present-day industry. At each stage the saw clearly emerges as a master tool, exerting a vital influence in social and economic development. Copiously illustrated, with over 90 illustrations, the book concludes with a review of the saws of all types in use today. "Story of the Saw" is published by Newman Neame Limited and is available from us, price 21s. 0d., post free. We very much hope that you will write to us and reserve a copy of what must be a limited edition.

A double-page spread from the "Story of the Saw."

CONDITIONS OF SALE

This catalogue cancels all previous editions.

Prices

In present circumstances orders can only be accepted on the understanding that the prices charged and discounts allowed are those ruling at the date of despatch of the goods.

Guarantee

We hereby warrant that in the manufacture of SPEAR steels and manufactured products branded NEVERBEND, SPEARIOR, MERMAID and SPEARSEG only the best workmanship and materials are employed and if any fault due to bad workmanship or materials is proved and the goods are returned within 6 months of delivery we will at our own cost replace the faulty goods but subject as aforesaid any expressed or implied warranties or conditions statutory or otherwise as to quality or fitness for any purpose of the goods is hereby expressly excluded in respect of these or any other goods supplied.

Loss and Damage in Transit

All goods are consigned at our risk. Property in the goods passes on delivery to the customer, the risk passing with the property. Consignees must notify us and the Carrier in writing of any damage or partial loss within 3 days and, similarly, non-receipt within 14 days from date of advice note or invoice. We accept no liability if by reason of failure to give due notice a claim for compensation cannot be sustained.

Packing

Cartons are used whenever possible and are charged at a nominal price of 1/- . *They are not returnable and their value cannot be deducted at settlement but customers save the cost of carriage on empties.*

Wooden cases are charged for but credited in full when returned in good condition carriage paid.

Returns

All goods returned should be accompanied by an advice note.

Goods made to Special Order

All goods made to customer's specification will be charged at the lowest possible price but when wholly or partially manufactured cannot in any circumstances be returned for credit or cancelled. The right is reserved to supply up to 10% more or less than the exact quantity of such specially manufactured goods.

(For settlement terms and carriage please refer to Discount Sheet.)
